

## Next.js - Meta Data

In Next.js, we can serve modify the head section of each react pages very easily with the help of **<Head>** react component which is inbuilt.

Let's update the nextjs project used in Pages chapter.

Update index.js as follows –

```
import Link from 'next/link'
import Head from 'next/head'

function HomePage() {
  return (
    <>
      <Head>
        <title>Welcome to Next.js!</title>
      </Head>
      <div>Welcome to Next.js!</div>
      <Link href="/posts/first"><a>First Post</a></Link>
      <br/>
      
    </>
  )
}

export default HomePage
```

Update first.js as follows –

```
import Link from 'next/link'
import Head from 'next/head'

export default function FirstPost() {
  return (
    <>
      <Head>
        <title>My First Post</title>
      </Head>
      <h1>My First Post</h1>
      <h2>
        <Link href="/">
          <a>Home</a>
        </h2>
      </>
    </>
  )
}
```

```
..... </Link>
..... </h2>
..... </>
..... )
..... }
```

Here we've added a reference to logo.png in index.js file.

## Start Next.js Server

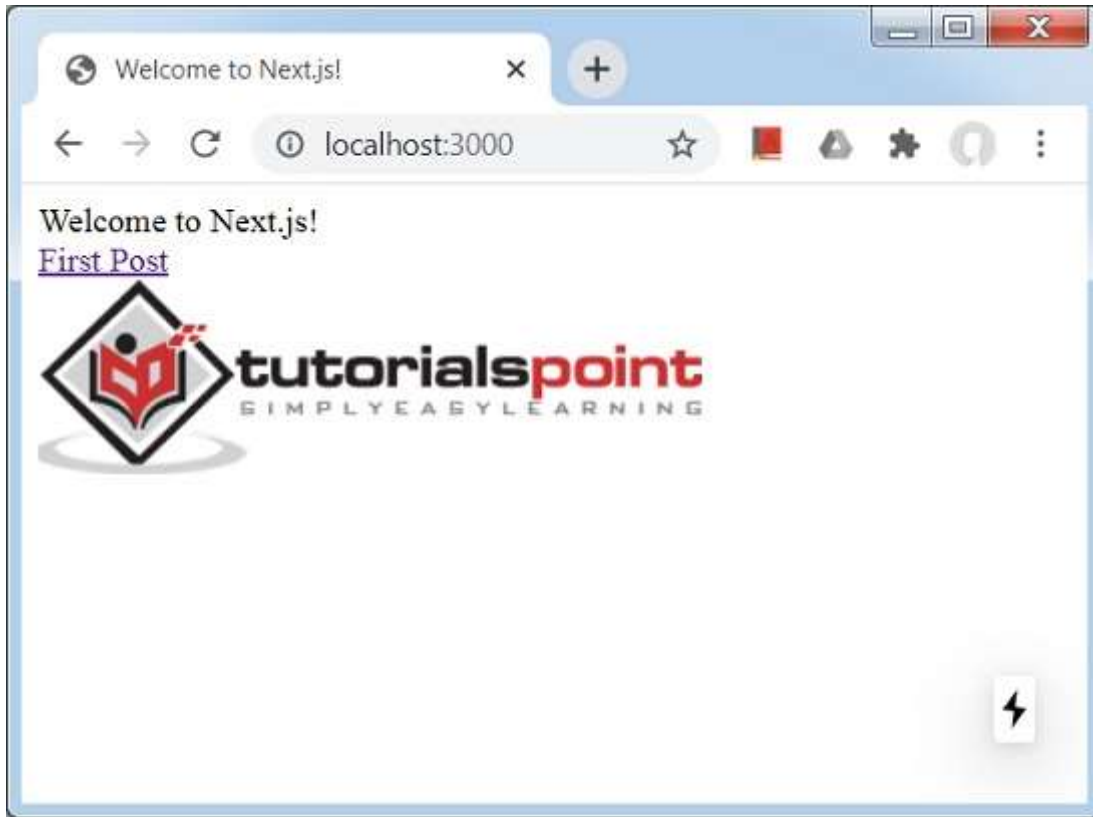

Run the following command to start the server –.

```
npm run dev
> nextjs@1.0.0 dev \Node\nextjs
> next

ready - started server on http://localhost:3000
event - compiled successfully
event - build page: /
wait   - compiling...
event - compiled successfully
event - build page: /next/dist/pages/_error
wait   - compiling...
event - compiled successfully
```

## Verify Output

Open localhost:3000 in a browser and you will see the following output.

Click on First Page link and verify the title changed in First Post page as well.
