

Next.js - Global CSS Support

In Next.js, Let's create global styles which will be applied on all pages.

In this example, we'll create a styles.css which will be used on all components using `_app.js` component.

Let's update the nextjs project used in CSS Support chapter.

First create a styles directory at root level and add a file styles.css as follows –

```
html,
body {
  padding: 0;
  margin: 0;
  line-height: 1.6;
  font-size: 18px;
  background-color: lime;
}

* {
  box-sizing: border-box;
}

a {
  color: #0070f3;
  text-decoration: none;
}

a:hover {
  text-decoration: underline;
}

img {
  max-width: 100%;
  display: block;
}
```

Create `_app.js` file in pages directory

```
import '../styles/styles.css'

export default function App({ Component, pageProps }) {
```

```
    return <Component {...pageProps} />  
  }  
}
```

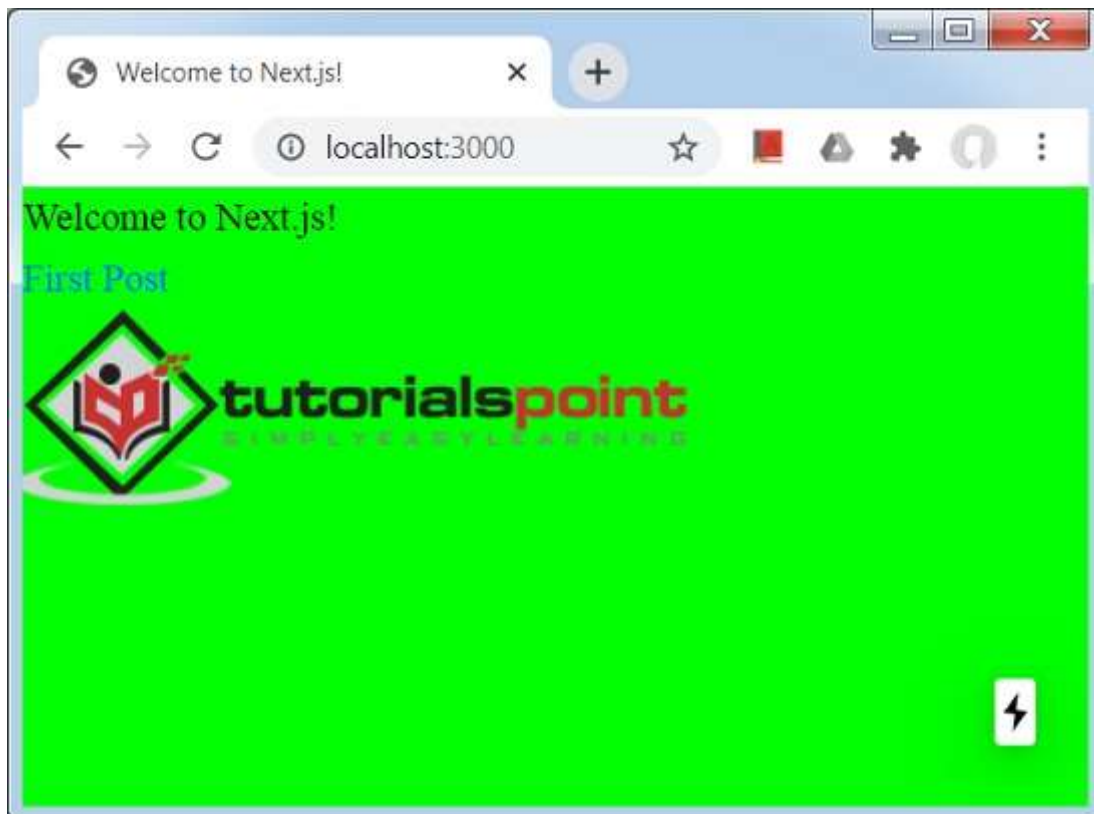

Start Next.js Server

Run the following command to start the server –.

```
npm run dev  
> nextjs@1.0.0 dev \Node\nextjs  
> next  
  
ready - started server on http://localhost:3000  
event - compiled successfully  
event - build page: /  
wait  - compiling...  
event - compiled successfully  
event - build page: /next/dist/pages/_error  
wait  - compiling...  
event - compiled successfully
```

Verify Output

Open localhost:3000 in a browser and you will see the following output.
